

# OMNI *control* & X-Link

## Hoist monitoring

### Hoist monitoring & app extension

The hoist monitoring system *OMNI control* collects and processes various parameter of the hoist operation. All information can be read out via display or conveniently via mobile app. Error-free calculations for the annual crane system inspection are thus quick and easy. The hoist monitoring system *OMNI control* is the cornerstone for digitally optimized work processes and opens the door towards all digital network technology of the future.

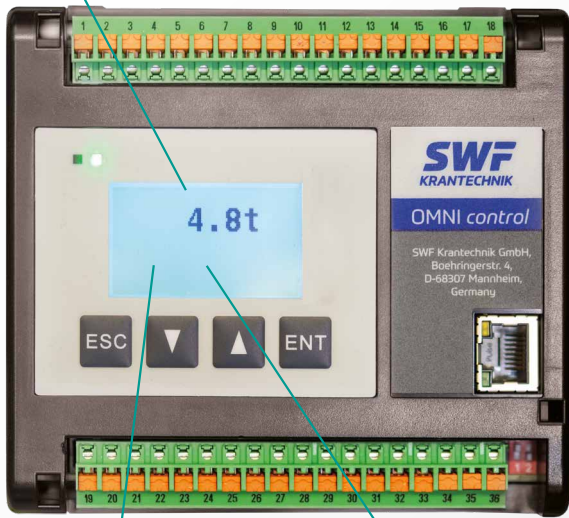

**X-Link**  
app extension

Current usage data  
(load, runtime, overload incidents, temperature,  
number of emergency stops, overtemperature)

OMNI control conveniently  
displays all parameters  
on the mobile phone

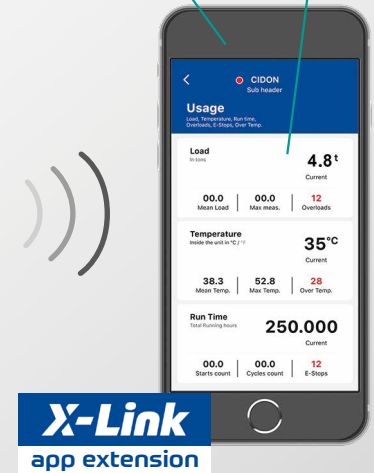

Easy data export into dif-  
ferent formats for e-mail-  
ing or archiving

Easy set-up  
via hardware module

General hoist status  
(service life of the complete hoist,  
brake and contactors)

Warning and error messages  
are displayed

# OMNI control & X-Link Hoist monitoring

## + Safety through overview

OMNI control offers perfect control: all current usage data (load, temperature, runtime, etc.) as well as the general hoist status (hoist service life, brake, etc.) can be shown at any time, and any warning or error messages are also displayed.

## + Reliable & fast maintenance

OMNI control makes time-consuming checks for the annual crane system inspection unnecessary and careless errors impossible: you gain safety and save time at the same time!

## + Convenient & clear with X-Link app

Thanks to the additional hardware module, the hoist monitoring data can be displayed wirelessly on the mobile phone via a reliable W-LAN connection. It is that simple and convenient! SWF makes it easy.
